### Lab: Use Documentation

- What are three of the primary responsibilities of a UIView object?
  - A UIView is responsible for drawing, layout, and event handling.
- What does documentation call a view that's embedded in another view?
  - A view that is embedded inside another view is called a **subview**.
- What does documentation call the parent view that's embedding the other view?
  - The parent view that contains and embeds another view is called the **superview**.
- What is a view's frame?
  - The **frame** defines the view's size and position in its superview's coordinate system.
- How is a view's bounds different from its frame?
  - The **bounds** define the view's size and position in its coordinate system.
